

# Review Reminder

## Overview

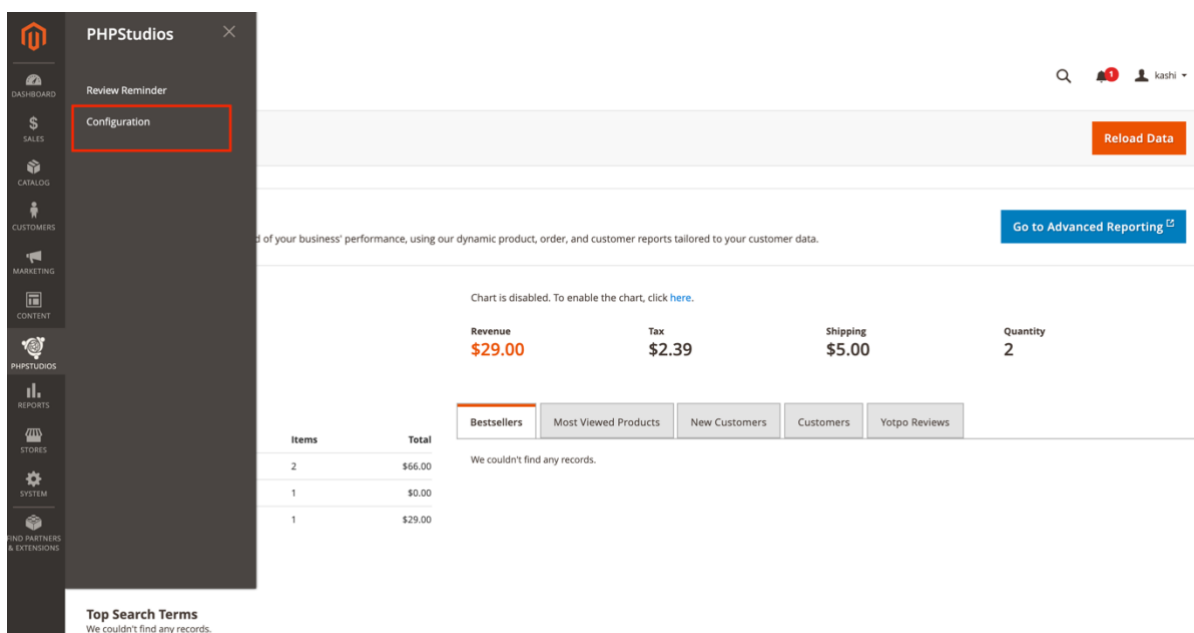

Review Reminder extension for Magento 2 has been developed by the product team at PHP Studios. PHP Studios Review Reminder extension is a great solution for your store to increase conversion rate and boost sale. By allowing sending automated notifications Emails to customers who have purchased products from the store, you can save time and get more reviews from them. The more reviews you get, the more trustworthy the store looks, which is an important factor for customers to decide on buying products from your store.

## Shared Package (Core Module)

There is a shared package (core module) associated with this extension having store configuration, menu items and logos. This extension expects to have a core module installed before/along with the extension as this extension has a dependency on the Core module.

## Review Reminder Configuration

In this extension, Merchants have to set some configurations to send Review Reminder email.

The screenshot shows the PHPSTUDIOS dashboard interface. On the left, a dark sidebar contains a menu with various icons and labels. The 'Review Reminder' section is expanded, and the 'Configuration' option is highlighted with a red rectangle. The main content area displays a dashboard with a search bar, a 'Reload Data' button, and a 'Go to Advanced Reporting' button. Below these, there's a section for business performance metrics including Revenue (\$29.00), Tax (\$2.39), Shipping (\$5.00), and Quantity (2). A table titled 'Items' shows a list of products with their total values. At the bottom, there's a section for 'Top Search Terms'.

Items	Total
2	\$66.00
1	\$0.00
1	\$29.00

### General Configuration

Number of days  
(store view)

☒ Use system value

Number of days after order placed to send the Email

Limit per cron run  
(store view)

☒ Use system value

Limit how many entities (review\_reminder) will be processed during one cron run.

Review Reminder Email Template  
(store view)

☒ Use system value

Email template chosen based on theme fallback when "Default" option is selected.

Review Reminder Email Sender  
(store view)

☒ Use system value

Order Status  
(store view)

☐ Use system value

Default Order Status for Review Reminder email to be process

- Number of Days:** This configuration will check for how many days should we wait before sending the email to customer via cron, this configuration is based on the order status once the order meets the requirement and reminder is generate this configuration tells them to how many days the cron should wait before sending the auto generated email. . i.e. if the value in the field is set to **7**, email will be sent to all the customers whose orders meet the requirement (The Order Status Equal to Configuration Order Status) and send the email after 7 days.
- Limit cron run:** Limit the number of entities to be processed per cron. i.e. if 10 entities exist in the Review Reminder grid table and their Review Reminder status is Not Send, the value in Limit per cron run is set to **5**, only first 5 Customers who have Review Reminder status **Not sent** will receive the email.
- Review Reminder Email Template:** Email Template that will be used for sending email to customer.
- Review Reminder Email Sender:** Set the email from which a customer will receive the email.
- Order Status:** This configuration will be used to check if the order status is equal to the Review Reminder's configuration order status which generates the entry in review reminder table for particular order which will be used to send an Email to customer via cron or manually i.e. if the order status is complete in the backend configuration so the order will not be shown in the review reminder grid until the particular order status is complete from where the admin can either send the email manually or via cron or delete the specific entry.

## Key Features

In Review Reminder Extension, merchants have two options to send Review Email.

### Automatically Sending the Review Reminder Email

When a particular entry for order is generated in the review reminder with status defined in the **configuration** as below, this order will be moved automatically to the review reminder table. Merchants will be able to view the orders in the **Review Reminder** grid. Just like in this case, the orders with status 'pending' will be moved to this grid. In this feature an automatic review reminder email will be sent to the customer using cron. We can set different configuration for auto generation of emails e.g. number of emails per cron, number days to wait before sending the email etc.

### Manually Sending the Review Reminder Email

When a particular entry for order is generated in the review reminder with status defined in the **configuration** as below, this order will be moved automatically to the review reminder table. Merchants will be able to view the orders in the **Review Reminder** grid. Just like in this case, the orders with status 'pending' will be moved to this grid.

**Review Reminder Grid:** A merchant can view grid with following features:

#### Columns

- **ID:** It will show the Review Id.
- **Purchase Date:** It will show the Order Created Date.
- **Updated Date:** It will show the last updated date for Grid Entity.
- **Purchase Point:** It will show the Store level.
- **Customer Email:** It will show the customer Email.
- **Customer Name:** It will show the full name of the customer.
- **Review Status:** It will Show the status of email Send to the customer or Not.

## Product Review

Hello mani mani,

You've recently bought products would you give us feedback?

Image	Items	View
	<b>LifeLong Fitness IV</b> SKU:240-LV05	<a href="#">Write Your Review</a>
	<b>Breathe-Easy Tank</b> SKU:WT09-XS-White	<a href="#">Write Your Review</a>

customer to product page on click the **Write Your Own Review** button.

## Installation via Composer

- Please run the following command

```
composer require phpstudios/reviewreminder
```

- Update the composer if required

```
composer update
```

- Please run the following commands to enable the module

```
php bin/magento module:enable PHPStudios_ReviewReminder
```

```
php bin/magento module:enable PHPStudios_Core
```

```
php bin/magento setup:upgrade
```

```
php bin/magento cache:clean
```

```
php bin/magento cache:flush
```

- If your website is running in production mode the you need to deploy static content and then clear the cache

```
php bin/magento setup:static-content:deploy
```

```
php bin/magento setup:di:compile
```

**NOTE:** This extension is compatible with all the versions of Magento 2.3.\* and 2.4.\*.  
Tested on multiple instances 2.3.6 and 2.4.1

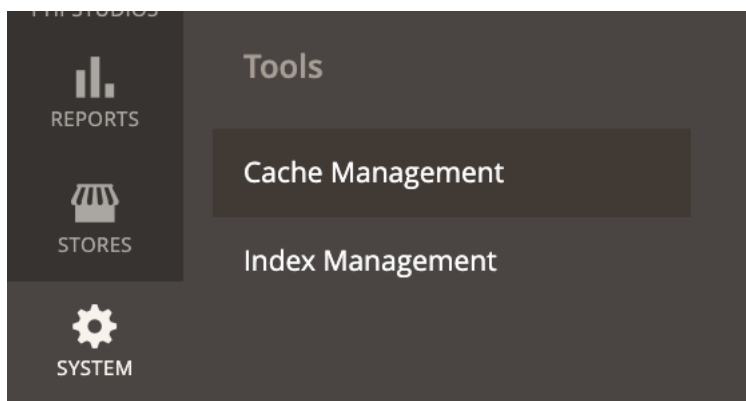

## Troubleshooting

By default, options are disabled, to apply Force Login functionality on different pages of website, you have to enable the option from the backend configuration i.e. you have to enable the force login functionality for Product Page. Please follow the below steps:

- In Menu Bar navigate to PHPStudios -> Force Login -> Configuration.
- In “Enable/Disable Force Login on Specific Pages” enable option for
- “Product Page”.
- Save the Configuration.

### Save Config
